SCIENCE INTRO TO YEAR 7

COLNE PRIMET ACADEMY

Welcome to Science in Year 7 — where your curiosity becomes your superpower. Get ready to explore the world in ways you've never tried before. From bubbling reactions to surprising discoveries, you'll investigate how everything around you works. Science isn't just something you learn — it's something you do, and you'll be right at the centre of it.

In your first year, you'll get hands-on with real scientific equipment. You'll look at hidden worlds through powerful microscopes, fire up Bunsen burners to heat, test, and experiment, and build circuits to understand how electricity powers the things you use every day. Each lesson brings a new challenge, a new question, and a new chance to think like a scientist.

Most importantly, you'll learn by experimenting, exploring, and discovering for yourself. You'll work with friends, test your ideas, and see what happens when you change just one thing. Sometimes your predictions will be right, sometimes they won't — and that's exactly how real science works. We can't wait to welcome you into the lab and see what you uncover next.
